Xantech presents the EX series-- high-speed HDMI cables with X-GRIP technology, allowing them to resist up to 4.5kg of pull force, keeping cables securely in place.

Designed for commercial installers, the EX series cables support all HDMI features, including HDR, 18Gbps transfer rates, resolutions up to UHD and DCI 4K at 60fps in 4:4:4 Chroma sub-sampling, Audio Return Channel, Dolby Surround and more. The line has a solid aluminium internal EMI shielding jacket encasing the entire connector head overlapping the cable's shielding well.

Meanwhile gold-plated contacts housed in a porcelain-shielded connector aid in rejecting stray capacitance from other interconnected components.

The EX series cables are available in 0.7, 1, 1.5, 2, 3 and 4m lengths.

Go Xantech.
