

*Computex 2011* hosts RedMere's announcing its PRA1701, a high speed self-powered HDMI module boosting cables to deliver up to 18Gbps of connectivity.

The module's 18Gbps data rate divides into 3 data channels at 6Gbps each, thus delivering 3DHD and interactive entertainment data while future proofing against increasing multimedia data rates.

It embeds into HDMI cable connectors-- allowing the cable itself to become up to 60% thinner than traditional HDMI cables, according to RedMere. This lightness can thus make it ideal for portable devices such as tablets and smartphones.
