Insteon adds a pair of HD wifi cameras as part of its smart home portfolio-- one for indoor and the other for outdoor use, both promising detailed 1280 x 720 resolution images, even in low light conditions.

The cameras feature a 70-degree field of view and night vision via IR LEDs, allowing the capture of images up to 8m (indoors) and up to 30m away (outdoors) in pitch black conditions.

The indoor camera also features 300-degree pan, 120-degree tilt, microphone and a speaker, all accessible remotely via mobile device and Insteon app.

“As we continue to grow our already extensive product line, we are focused on our customers and the overall connected home experience,” the company says. “We are pleased to be able to offer HD video to our customers who are looking to add another layer of protection for their home and loved ones.”
