Niles launches its next generation of outdoor speakers-- the GeoRealistic Pro Rock and Planter speakers, delivering the highest quality audio in any climate, according to the company.

GeoRealistic Pro speakers feature a new protective finish and a 4-layer fiberglass weave, making them 5X more durable and long lasting than the previous rock speaker generation even under extreme UV conditions.

Advanced conformal coatings on the crossover boards protect the speakers against moisture, dust and chemicals

Niles says the speakers are able to withstand temperature ranges from -45° to 85°C.

The Planter speakers blend into any outdoor environment and are available in x2 types-- the PB6Si Pro rectangular shape and the PS6SI Pro circular planter. Both are available in x2 colours, terra cotta and weathered concrete.
