

Aperion promises "Hi-Fi via wifi" with the ARIS-- a wireless speaker using the AirPlay-style Play To streaming feature sitting inside Windows 7.

The ARIS connects to your customers' home networks through either wifi or ethernet. It is DLNA certified and offers 100W RMS of power.

Handling wired streaming is an auxiliary jack at the back of the speaker.

Inside the single-piece brushed aluminium enclosure are x6 speakers (x4 powered drives and x2 passive radiators) with x3 sound modes (natural, bass boost and enhanced stereo).

For wireless control, Aperion offers an ARIS music app (for Android or iOS), while the speaker is also compatible with most other DLNA apps.
