---

Sonance adds the HS10SUB 70V Hardscape subwoofer to the Landscape speaker series, ideal for incorporation with outdoor furniture or planter boxes.

It features a sealed non-corrosive enclosure with construction in brown-textured HDPVC (High-Density Polyvinyl Chloride). One installs the enclosure above the ground, and can also build it into outdoor furniture or underneath vented planter boxes.

The 254mm polypropylene cone driver has a rubber surround and delivers a frequency response of 35-100Hz ( $\pm 3$ dB). Sonance claims the speaker delivers scaleable "high quality audio" in challenging hardscape environments.

The HS10SUB works in combination with the LS10SUP in-ground subwoofer in installations demanding a combination of landscape and hardscape products to achieve an even sound stage.
