---

MartinLogan enters the soundbar market with the Motion Vision soundbar-- one the company describes as a single-speaker 5-channel surround sound system.

It features three Folded Motion tweeters, four 4-inch woofers, seven amps (together delivering 100W), dual rear-firing bass ports and wired subwoofer output. Dolby Digital and DTS surround-sound provide decoding, while Dolby Virtual Speaker simulates virtual surround.

Customers can boost bass by using the built-in wireless transmitter to add a compatible MartinLogan wireless subwoofer, while connections include digital optical, digital coax and analog stereo inputs.

The Motion Vision soundbar is wall-mountable (via included mounted bracket) or free standing, with switchable audio settings optimising sound for either placement.

It features a high-gloss piano black curved chassis with brushed aluminium accents and a dimmable LED display behind the front grille cloth.
