The Klipsch-owned Energy brand expands the Energy Power speaker series with 2 compact power subwoofers-- the Energy Power 10 and Energy Power 12.

The Energy Power 10 features a 10-inch front-firing woofer, a 50W continuous amplifier, switchable 0-180-degree phase control, rear slot port (increases efficiency), x2 line-level RCA inputs, x2 speaker-level inputs, auto power on and an electronic circuit preventing driver over excursion.

It measures 30 x 29 x 35cm.

The Energy Power 12 adds a 12-inch driver and a 75W continuous amp, all inside housing measuring 35 x 34 x 40cm.

The company also hopes to add affordable passive speakers to the Power series by 2013.
