Artcoustic adds new soundbar models to its portfolio-- the Multi Soundbar SL series (available in x4 standard sizes) and the C-2SL high performance, high output loudspeaker.

The four Multi Soundbar SL models (1039mm, 1230mm, 1357mm and 1499mm) share the same specifications, with 65Hz-40Khz operating range and left/right/centre SPL at 1W is 87dB (Max SPL 101dB).

Designed to complement current LED TV and projection screen designs, the Multi Soundbar is configurable as either an LCR or mono loudspeaker.

Meanwhile the higher performance C-2SL measures 209mm x 67mm (with 1115 - 2500mm widths) and is mountable either vertically or horizontally. It carries a 12-6 array (12 x 3" bass units, 6 x 1.5" tweeters) and complements higher output (8-4 arrays and higher) speakers.
