

Bose Wants to Improve TV Audio

Written by Marco Attard

Customers lacking the space for a home theatre system but still wish to boost the sound of their HDTVs might like the Bose Solo TV-- a single speaker product ideal for general TV applications.

The unit measures 52.5 x 30.9 x 7cm and sits under flat panel TVs measuring between 81-106cm. Sound comes through Bose digital sound processing and speaker array technology.

It is also very easy to set up, since it only uses one speaker and one cable connection (either optical, coax or analogue).

The package includes a remote control, but the unit should also be compatible with most universal remotes.
