The wireless audio market is the next big step for SpeakerCraft-- the company unveils the Synergi Wireless Whole House Music System at CEDIA Expo 2012.

SpeakerCraft describes Synergi as "a no-new-wires retrofit solution" designed to help customers avoid the hassle and expense of hardwired multiroom installations.

The system features a transmitter a receiver, with each transmitter handling up to x8 receivers. The transmitter simultaneously handles inputs from up to x4 sources, with x3 stereo analog line level 3.5 audio inputs and a 4th input switchable between 3.5mm analog and digital optical PCM, allowing users to create a 4-source-by-8-zone multiroom system.

Meanwhile the receiver includes a 35W 2-channel digital amp (with Texas Instruments Equibit technology), Bluetooth support and 3.5mm jack for mono sum input.

The receivers are flexible when it comes to placement, being both shelf- and wall-mountable.

SpeakerCraft will start shipping the Synergi system from Q1 2013 with a package including transmitter, receiver and remote.
