MartinLogan enters the headphone market with the Mikros 70 and 90-- reference in-ear and on-ear headphones the company claims deliver the same quality audio as their bigger electrostatic brothers.

The Mikros 90 is the flagship model, with leather and polished aluminium construction and replaceable soft ear pads. MartinLogan says the ear pads isolate over 92% of surrounding ambient noise, with 35mm drivers producing a frequency response of 6Hz to 22kHz.

The headphones are 98dB sensitive, with maximum SPL rating of 112dB.

The included inline remote/microphone carries Apple approval, and is also compatible with most other smartphones.

Meanwhile the Mikros 70 have solid aluminium construction, with metallic end caps isolating ambient noise. The package includes a selection of eartips (x3 bulb tip sizes and x2 flange tip sizes) and an in-line remote/microphone compatible with devices carrying a standard 3.5mm 4-conductor socket.
