The Pure Jongo multiroom audio series gets 2 additions at CES 2013-- the T640B wireless stereo speaker and the A140B wireless hifi adapter.

The T640B acts as a successor to the S340B and pumps 100W of sound through two 5.25-inch full range drivers with dual-concentric tweeters. Connectivity comes through Bluetooth, wifi or a pair of phono jacks, and the speaker also streams audio from other Jongo products connected to the network.

Mounting comes through either optional stand (allows either landscape or portrait orientation) or bracket accessory kit.

Meanwhile Pure claims the A140B wireless adapter transforms "any audio system into a music streamer." Wireless connectivity comes through wifi and Bluetooth, while extra outputs include optical, coax digital and phono.

A 24-bit DAC (digital to analogue converter) is also built-in.

All Jongo devices come in black or white with black speaker grilles, together with optional user-fit coloured grille packs and clip-on covers in orange, green, mango or white. Both T640B and A140B will be available sometime during H1 2013.
