ISE 2013 visitors can check out the results of the latest Stewart Audio technology licensing agreement-- a prototype Dante Ultimo amplifier, with technology from inventors Audinate PTY.

Available from Q2 2013, future Dante amplifiers will span 1-4 channel counts with both low impedance and 70V/100V and up to 320W per channel.

Package sizes are either subcompact or half rack, all with convection cooling.

"Stewart Audio is developing a great line of innovative network amplifier products, and we welcome them as one our first Ultimo licensees," Audinate says. "We are pleased to work with Stewart Audio in providing Dante as a complete networking solution for its industry-leading products."
