Audinate used the occasion of the AV Networking Congress to announce the newest member of the Dante product family: **Ultimo**.

Ultimo is a complete, fully-featured, ready-to-use Dante interface for networked audio products, integrated into a single 13 x 13mm chip. By providing an integrated, cost-effective networked audio solution over a 100Mbps Ethernet interface, Ultimo extends the benefits of Dante networking to a wide new range of audio devices.

Audinate calls Dante “the most interoperable, easy-to-use digital network solution available”—and many AV integrators agree with that. Dante is licensed by more than 70 OEM manufacturers, and Dante networked devices are currently being designed into hundreds of AV OEM products.
