Triad Speakers announces the new InWall Bronze/4 SlimSub-- a slimmer version of the earlier InWall Bronze/4 Sub designed to fit into standard 4-inch (10.2cm) wall cutouts.

The new model is around 10cm deep and features a flat-grille, flush-mount design allowing it to fit room decor better than its predecessor.

It delivers maximum output of 109dB from 40-80Hz with bass extension of -6dB at 25Hz, performance Triad says rivals the company's larger 6-inch deep InWall Bronze/6 model.

According to the company the sealed enclosure is fine-tuned to match the excursion of the proprietary long-throw 10-inch aluminium driver. The integrated round steel back-plate replacing the thick MDF behind the driver captures more air volume to accommodate the lengthy throw of the driver.

The SlimSub fits in the same cut-out (size "V") as other Triad in-wall subs, making it ideal for retrofit opportunities. It incorporates all 3 types of Triad Acoustimesh grill (wide, narrow and frameless), and the company can custom paint-match at the factory.

Triad Updates SlimSub
