Marantz launches a pair of additions to the M-CR network stereo receiver series-- the M-CR510 and M-CR610 wireless systems, both providing access to media from home networks, online streaming services and mobile devices.

The M-CR610 features an AM/FM tuner, embedded CD player and 4 amplification channels. The M-CR510 lacks tuner and CD player, and features a 2-channel amp.

Both are Windows8/RT-compatible and carry built-in wifi (with 802.11e certification), vTuner internet radio, AirPlay, DLNA 1.5 certification, USB ports on front and back, and support for Spotify, Pandora and Sirius XM streaming media services.

Supported audio formats include MP3, WMA, AAC, FLAC, ALAC and WAV.

Customers can control the receivers through either supplied remotes or Marantz iOS Remote App, and both feature an optical digital input allowing use as a DAC.
