

Russound Updates Audio Software

Written by Marco Attard
13. 08. 2013

Russound updates C-Series multiroom audio system software with Release 7-- now with additional streaming radio service access (namely Pandora and TuneIn), Apple AirPlay support and integration with control systems from other vendors.

The update covers the DMS-3.1 digital media streamer, TS3 colour touchscreen, MCA-C3/C5 multizone controller amplifier, MDK-C5/C6 multiline display keypad and My Russound MRA-3 app.

AirPlay support comes complete with song metadata on keypads, while 3rd party integration allows control of the DMS-3.1 streamer via Control4, Key Digital and RTI control systems.

Release 7 also updates all connected MDK-C5/C6 keypads over IP, saving time for both installers and customers.

The update is available now as a download from the Russound link below.
