Sonos launches its smallest wireless speaker yet-- the Play:1, an all-in-one speaker packing the company's own midrange/woofer and tweeter inside an entry-level pint-sized package.

Like other Sonos products the Play:1 connects to wireless networks either independently or via other Sonos devices (such as the included Bridge) to play audio from PCs and iOS/Android devices or streaming services such as Pandora, iHeart Radio, Spotify and Sirius XM.

The app also selection of different operation modes, including single enclosure stereo speaker, in pairs in left/right stereo configuration and as a companion to other Sonos products to form a complete audio system.

The Play:1 is available now in either black or white.
