Thiel Audio launches the TM3 2-way loudspeaker-- a "new design approach" from the company complete with high-performance proprietary components inside a sleek multi-ply wood enclosure.

"Our ultimate goal for the TM3 was to create a loudspeaker that outperforms competitive products while pleasing the discerning eye of décor-conscious consumers," the company claims.

The TM3 features superior on and off axis frequency response uniformity, high-power handling and ultra-low distortion levels. The 2-way design uses a proprietary 6.5-inch cast basket woofer with a fibreglass cone and a 1-inch metal dome tweeter pushing 45Hz to 30KHz bandwidth.

Nominal impedance is at 8 Ohms, with the minimum at 3.5 Ohms.

Thiel starts shipping the TM3 in standard finishes with optional stands from Q2 2014.
