At, ISE 2014, Attero Tech will unveil its new unIFY series control modules for its affordable networked AV systems and third-party devices. The new products include the **CommandHub** for third-party devices and
RemoteHub
for the AT DialogBox [see attached images].

"Our goal with unIFY is to offer customers a more complete networked AV solution that's affordable, flexible and highly capable," says Mike Sims, Director of Marketing and Sales. "These products will expand our customer's options significantly."

The **unIFY CommandHub** enables 3rd-party devices to communicate with and control the company's Dante and Cobranet-equipped products. It can also be used to bridge separate control and audio networks. CommandHub has an embedded web server for configuration. Required setup, however, is minimal. CommandHub connects via CAT-5.

Attero Tech will publish its control protocol for its products that 3rd-party, control-systems programmers can use in conjunction with the CommandHub to control and monitor AT devices.
