Dynaudio launches a custom installation in-wall and in-ceiling speaker line-- the Studio Series, featuring two round in-ceiling (the S4-C65 and C4-C80) and two rectangular in-wall (the S4-W65 and S4-W80) models.

Both in-ceiling and in-wall models can either be pre-installed or retrofitted into existing cavities for remodels. Low-profile slim bezels and paintable grilles allow for easy matching to room decor, and attach magnetically for 100% product coverage. A round grille comes as standard with the in-ceiling models, but customers can also order a square option.

A patent-pending two-piece tool-less mounting system makes for simpler installation. The pre-installation frame mounts quickly and firmly into the speaker cut-out via auto-locking clamps, and the speaker unit housing the baffle, drivers and crossover mounts securely within the frame via locking drop-stop latch system.

An 18-degree angled, fully rotatable 6.5-inch (S4-C65) or 8-inch (S4-C80) mid/bass driver mated to a 1-inch tweeter with three-position adjustable tilt and a high-frequency level (+/- 3dB) switch facilitates flexible speaker placement and optimal sound directivity. In the case of room arrangement change, installed in-ceiling speakers can be adjusted simply without need to reposition the mounting frame.
