French audio maker Focal presents an easier means to provide customers with a Dolby Atmos system-- the Sib Evo Dolby Atmos, a 5.1.2 speaker package.

The package consists of x2 Sib Evo Dolby Atmos speakers (both featuring integrated Dolby-enabled upfiring drivers and front-firing speakers), x3 Sib Evo satellites (2 for rears, 1 horizontally aligned as centre speaker) and a Cub Evo subwoofer (floating below). The Atmos drivers are angled to bounce channel information off the ceiling for an overhead effect.

A connector system with push buttons makes the satellite easier to hook up to a Dolby Atmos receiver, while power comes through double (not single) connectors. Installers can either wall-mount the satellite speaker or place them on (optional) matching floor stands.

The Sib Evo Dolby Atmos package is available now. Focal also offers a Sib Evo Dolby Atmos 2.0 version, for customers wanting to add Atmos to existing setups.
