Legrand presents the Nuvo P600 Player-- the first model in the Player Portfolio whole home audio line designed for the DIN rail mounting system commonly found in Europe and the rest of EMEA.

Compatible with other amplifiers in the Legrand Nuvo ecosystem, the P600 supplies up to 40W of power to a single zone via built-in Class D digital amplifier. The system supports as many as 16 players and 16 simultaneous, independent streams, and the P600 gives any room access to music from networked collections or a variety of internet and radio streaming services, including Spotify, Napster and Deezer. Control comes via Nuvo Player Portfolio app or Nuvo in-wall keypads.

Installers can mount the P600 alongside compatible device from Legrand and other manufacturers on the DIN rail. Power comes through the Legrand P601 power supply, and one P601 can power up to four P600 players. One can pair the P600 with the P500 soundbar and subwoofer and P400 tabletop speakers to create a multi-room audio system, or integrate it with 3rd party control platforms such as Vantage, Bticino, Control4, KNX, URC, RTI and Domotz Pro.
