Focal introduces the 100 IWSUB8-- a passive bass-reflex subwoofer designed for in-wall mounting-- together with the 100 IWSUB8 dedicated amplifier to the 100 series of discreet audio solutions.

The 100 IWSUB8 passive subwoofer consists of an 8-inch Polyglass speaker driver, and can be installed during the pre-construction of a wall using 16-in OC studs. It has a shallow in-wall depth (33/8-in) and a bass cut-off frequency of 30Hz to -6db, and installers can paint the magnetic grille to match the decor of the room, making it discrete.

Meanwhile the dedicated 100 IWSUB8 amplifier is designed to compliment the subwoofer. It is capable of powering up to two subwoofers connected in parallel, delivering 200W of peak power under 4 ohms, and is ideal for integration with a rack mountable design.
