---

As one might expect from Flexson, the Sonos accessory specialist has a trio of installation options for the recently launched Sonos Amp-- the SA-WM Wall Mount, SA-X4WM Wall Mount for 4 Sonos Amps and the SA-X4DK Dock, also for 4 Sonos Amps.

The SA-WM allows installers to mount the Sonos Amp to the wall. It measures 288 x 217 x 70mm, and features a bespoke plate attached to the wall allowing one to securely slide the Amp in place. A cable cover colour-matched to the Amp hides wires. The mount also allows customers to mount the amplifier to the back of a TV using VESA mounts.

Applications featuring multiple Amps get the SA-X4WM-- a wall mount for 4 amplifiers with a hinged design providing easy access to cabling. It uses the same colour-matched cover as the SA-WM to hide cables. Security screws ensure Amps cannot be removed unintentionally, and installers can add a padlock for extra security.

The SA-XDK dock also holds up to 4 Amps within a single unit, keeping installation compact and tidy. Installers can mount it on a desk as well as a wall, or secure it to the underside of a cabinet if the customer wants to conceal the Amps. Retaining clips allow the Amps to slide into the mount, but a secure design holds them securely in place. Internal cable management keeps setup tidy.

The above mentioned Flexson mounts are available now.
