Lithe Audio presents a bathroom version of its wifi all-in-one ceiling speaker-- the IP44 bathroom ceiling speaker complete with built-in amplifier and wifi, making it an all-in-one solution for multi-room music streaming.

The Lithe Audio wifi ceiling speakers enable streaming from any audio service to a single or up to 30 speakers at once for a full multi-room experience. A companion app saves settings for individual zones, or can deliver an all zone party mode. The speakers are AirPlay-certified, and the app is compatible with Spotify Connect, Deezer, Tidal and vTuner.

The speakers, including the bathroom version, offer a fully integrated solution. As such installation promises to be simple, as one needs to connect power from a lighting circuit and link to a smartphone or tablet via app before being able to start playing music. Users can switch between mono and stereo output, and have varying volume levels in each room while playing multi-room audio.

Designed to "disappear" in the ceiling, the frameless speakers protrude by just 3mm. The magnetic grille covers are removable for easy cleaning or replacement with a different coloured finish, and can also be painted to match the ceiling.
