Swedish audio maker Urbanears takes on the portable Bluetooth speaker with Rålis, a battery-powered offering complete with carrying strap and construction the company says comes complete with IPX2-rated water resistance.

The battery inside the Rålis promises up to 20 hours of wireless playtime, and can even double as a power bank via built-in USB-A port. Wireless connectivity comes through Bluetooth 5.0, allowing users to pair x2 phones with up to 10m distance, and a 3.5mm jack provides means to add a 3rd device.

Speakers on both front and back allow for richer, spatial sound. For the curious, inside are a pair of 5W tweeters and a 10W woofer. Flush-mounted buttons provide music controls while keeping with a minimalist design.

The Rålis is available in a choice of gray, red or blue colours.
