Control4 announces no less than 14 Triad Distributed Audio series multi-room loudspeakers, with different sizes and configurations designed with builders, contractors and homeowners in mind.

Distributed Audio speakers feature pivoting tweeters in different sizes, as well as in-wall and in-ceiling configurations. All models ship with a white, round, low-profile grill, and Control4 also offers replacement square and round grills customers can custom-paint to blend into any décor. Installation promises to be fast and simple thanks to a mounting screw system and a tweeter bridge doubling as a handle.

The first set of speakers on offer is the Distributed Audio Series 1-- two multi-room speaker solutions ideal for background music. Available as an in-ceiling (TS-IC61) or in-wall (TS-IW61) model, series 1 speakers utilise polypropylene woofers and 3/4-inch aimable cloth dome tweeters, and offer long life, installation flexibility and clear sound.

Distributed Audio Series 2 speakers come in either in-ceiling or in-wall options. According to Control4 the speakers are acoustically-refined and can fill the entire home with music thanks to reinforced poly-mica woofers and aimable Teteron dome tweeters. All four in-ceiling (TS-IC52, TS-IC62, TS-IC82, and TS-IC82DT) and two in-wall (TS-IW62 and TS-IW82) models are voice-matched, allowing customers to mix and match speaker configurations and still enjoy identical tonal qualities from room to room. For installs demanding stereo sound in a smaller space the TS-IC82DT carries dual tweeters.

The final set of speakers is the Distributed Audio Series 3, with four in-ceiling models (TS-IC53, TS-IC63, TS-IC83 and TS-IC83DT with dual tweeters) and two in-wall models (TS-IW63 and TS-IW83) featuring 1-inch aimable silk dome tweeters for high-frequency sound and carbon-fibre woofers for durability and deep bass. The in-wall speaker models carry an
