US speaker maker KLH makes a move into the European market with the release of a first pair of headphones-- the Ultimate One, over-ear open-air headphones featuring 50mm beryllium drivers inside real ebony wood earcups.

Launched at the 2019 MTV Movie and TV Awards, the Ultimate One headphones include a hand-stitched headband and dual-layer memory foam in the ear pads for comfort and support in long listening sessions. Inside are the aforementioned 50mm beryllium drivers claiming frequency response of 18kHz-22kHz and a sensitivity rating of 97dB.

“Our design goal with the KLH Ultimate One was to deliver a rich, enveloping musical experience that, simply put, elevates the soul,” KLH says. “Given the amount of overwhelmingly enthusiastic responses we have received from critics, celebrities and consumers, we have achieved just that.”

Also found inside the package are a 2m detachable pure silver-litz braided cable with a 3.5mm jack, removable 0.25-inch adapter, and a choice of either hard-sided black leather travel case or soft velour bag.

The Ultimate One headphones are available now.
