Legrand launches a family of Nuvo 8-inch in-ceiling and in-wall passive subwoofers and matching digital amplifiers. The three subwoofers are aimed at small, medium and large home theatre and audio installs, while the amplifiers promise convenience and versatility.

For smaller installations, the NV-SUBIC8 in-ceiling subwoofer features a round magnetic grille (with an optional square grille available) and an infinite baffle designed for maximum placement flexibility. The NV-SUBIW8 and NV-SUBIWDUAL8 are designed for medium and large projects respectively, and both feature a sealed MDF cabinet for a distortion-free bass experience. The NV-SUBIW8 has a square magnetic grille, while the NV-SUBIWDUAL8 features a rectangular grille.

Customers can deploy up to two NV-SUBIC8, NV-SUBIW8, and NV-SUBIWDUAL8 subwoofers with the matching amplifiers-- the 100W NV-SUBAMP100-xx, 200W NV-SUBAMP200-xx and 500W NV-SUBAMP500-xx, respectively. All three units feature signal-sensing power activation, unfiltered LFE/RCE stereo inputs for connecting to most receivers and variable crossover and phase control to match subwoofer output with the main speakers. A three-position EQ switch allows installers to tailor amplifier output to any Nuvo in-ceiling or in-wall passive subwoofer.

The wall-mount NV-SUBAMP100-xx amplifier offers a two-conductor connector to power an optional wireless receiver. The rack-mount NV-SUBAMP200-xx and NV-SUBAMP500-xx feature 12V DC trigger inputs and outputs, allowing them to control or be controlled by external devices. The NV-SUBAMP500-xx adds digital signal processing (DSP) for a variety of listening modes and an easy-to-navigate front screen. IR input allows use with control systems.

The Nuvo subwoofers and amplifier range is available now.
