Next Level Acoustics announces the Fusion Frame-- a soundbar designed for use with the Samsung Frame TV, featuring a picture-frame bezel, 4.4cm depth and no-gap mounting, the result of proprietary enclosure.

According to the company, the soundbar has an internal air-load management system and proprietary woofer capable of pushing deep natural bass from a shallow cabinet. Inside are a 1-inch soft dome tweeter from audiophile Danish driver maker Viva, as well as a proprietary crossover using high-grade precision components. A custom ultra-rigid sealed enclosure comprising a CNC-machined MDF and anti-resonant coating ensures the cabinet is vibration-free

Making the soundbar installer-friendly are recessed terminal cups with gold-plated heavy-duty binding-post/banana-jacks and recessed cable management channels for a no-gap mount. Customers can remove the magnetically-attached grille for access to cabinet installation holes to directly attach the bar with the included screws into wall studs or mounting to a wall via anchors.

The soundbar has a black Plex finish to match the standard Frame TV bezel and an acoustically transparent fabric grille. An optional white lacquer is available to match white Frame TVs. While the Frame TV is off and displaying art, customers can sync favourite music to the Fusion Frame soundbar to provide accompanying tunes.

The Fusion Frame is available in x6 sizes to match the four sizes of Frame TVs. Four are stereo soundbars and two are LCR models for the larger 55- and 65-inch TVs. All use the same drivers. In addition Next Level Acoustics offers a generic version of the soundbar for non-Frame TV applications of any size with the Fusion Flat series.
