Yamaha debuts a complete home theatre solution with the YHT-679BL-- a system in a box replete with Apple Airplay-compatible receiver and a full 5.1 speaker package.

The speakers include 2 front tower speakers, 3 compact satellites for the surrounds and centre channel and a 6.5-inch 100W subwoofer packing Yamaha's Advanced YSTII technology.

The receiver is not only Airplay capable (connecting to iDevices via free Yamaha AV Controller App)-- it also handles networked content from internet radio stations and DLNA-certified devices and supports HDMI 4K and 3D video pass-through with Audio Return Channel.

Other features include CINEMA DSP 3D (with 17 DSP programs), 192/24 Burr Brown DACs and Yamaha YPAO system calibration, as well as Dolby True HD, DTS-HD Master Audio, Dolby Digital Plus and DTS-HD High Resolution Audio decoding.
