Christie launches a first in its 85-year history-- a home entertainment division, revealed at CEDIA Expo 2014 with a variety of 3-chip DLP, 1-chip DLP, flat panel and audio solutions aimed at the consumer segment.

At CEDIA, a Christie home entertainment theatre demos DCI and alternative 4K content, while smaller secondary displays show off alternative content.

Visitors also get the chance to win a pair of M1 Vive Audio speakers.

“Now, the Christie cinema experience you’ve enjoyed at your local theater is available in the comfort and convenience of your home,” the company says. “Working with an elite dealer system, Christie will orchestrate the delivery, installation and servicing of a wide-range of projectors, flat panel displays, processors and audio solutions to strengthen and complement the services of these high-end integrators.”
