SpectraCal offers a free solution for home theatre enthusiasts wanting automated test patterns for flat panel or projector calibration with the MobileForge mobile application.

CalMAN home theatre calibration software users can use the app to generate patterns for TVs or projectors straight from their mobile devices-- replacing the pattern discs of days past.

Android users require an HDMI adapter according to the device in question. As the company puts it, "some devices, like Samsung, use an eleven or five pin active MHL micro-USB to HDMI adapter, while other devices will require different connections."

On the other hand Apple users need either a Lighting Digital AV adapter or, for older iDevices, an Apple Digital AV adapter.

Calibration is even easier for Apple TV or Google Chromecast owners-- one can simply screen-mirror the app to TVs without need for an HDMI adapter.

The MobileForge pattern generator app is available as a free download from the Apple and Google Play stores.
