DF Solutions says its Base media server is now fully enabled for Blu-Ray disc storage, playback and multi-room distribution.

The Base Media Server from DF Solutions positions itself as the most affordable media server on the market with Blu Ray compatibility.

The Blu-Ray capable Base Media Server offers 1TB of internal storage but can be linked to additional LAN-based NAS (Network Attached Storage) devices on the home network for unlimited expansion as required.

A new feature is the compatibility with the latest "Teamviewer" software, enabling installers to access the unit over the internet from a remote.

The Base Media Server features a unique, advanced 3D-interface.

The Base unit can be used in a single room or easily integrated into a whole home custom installation using the Link Clients and is controllable from many control systems, including Philips Pronto, iPhone, AMX and Crestron.
