

CEA and CEDIA Settle Standards for Bulletin

Written by Marco Attard
28. 10. 2010

CEA/CEDIA-CEB23: Home Theatre Video Design provides guidelines to accurately calculate screen size and design systems for video devices. This industry bulletin will allow OEMs and ESCs to measure screen and design systems precisely, ensuring the home theatre experience.

CEA research and standards VP Brain Markwalter says with 31 million HDTV sales projected for 2010, accurate home theatre designs parameters are essential.

The bulletin also provides information for ESCs preparing for certification exams.
