Acoustic Geometry announces the StarField Ceiling Tiles-- an acoustic ceiling panel with a starry sky effect designed for use in home theatres and media rooms as well as studios, retail spaces and restaurants/bars wanting a "wow" factor.

Designed to add the beauty of a night sky to any room with a drop-in ceiling, the tiles are a more affordable alternative to the original, custom-only StarField Ceiling Panels from the company. Fabric-wrapped fibreglass panels improve sound quality in any space, taming reverberation and ambient noise, and connect to main lighting control systems via RS232 adapter.

Custom-size and shaped panels are available upon request. In addition to the stock StarField ceiling tiles, AG offers several optional add-ons, including shooting star and acrylic moon/planet inserts. All design simulate "twinkling" with dim, medium and bright stars for a starry sky appearance.
