Crestron says the DigitalMedia 6X6 Distribution Center (DM-MD6X6) upgrades further on existing DigitalMedia 8G+ solutions as it delivers both analog and HD signal routing to up to six rooms using a single cable.

Carrying next generation DigitalMedia 8G+ technology, it delivers handles all analog and HD digital content (from HDTV receivers, Blu-ray players, media servers and PCs) as well as control, data and ethernet over standard CAT5e, DM 8G or CresFiber 8G cables over distances of nearly 100m without using compression or repeaters.

Customers using Crestron CNX-PVID systems can now also upgrade to DigitalMedia 8G+ systems without actually rewiring.
