RTI launches an expansion module line for the XP control system series-- with new offerings including the RCM-4 relay control module, ESC-2 serial control module and the PCM-4 I/O port control module.

The ESC-2 allows installers to add x2 additional bi-directional serial ports, while one can use the four relays in the RCM-4 in a normally open or closed configuration for control over everything from window shades to screen lifts.

Meanwhile the PCM-4 provides IR routing capabilities, one-way RS232 communications and power sensing via MPIO ports (x4 MPIO ports and 12-VDC voltage trigger output) when used with RTI accessory devices.

The PCM-4 and RCM-4 can be powered through either power supply (included) or Power over Ethernet (PoE).
