Leaf uses ISE 2014 to launch the LTPTP-F, an easy to install HDBaseT extender able to push uncompressed HDMI and 4K 24fps content for up to 100m using regular Cat6 cable.

In addition it also carries IR and RS-232 control signals with no need for a power source at the receiver end.

"AV distribution requirements are constantly evolving," the company says. "As consumers demand more from their audio and video solutions, Leaf is prepared to deliver. With the ability to seamlessly transmit 4K, our new HDBaseT Extender Solution equips dealers with a dependable solution that can deliver true uncompressed HD signals over a single wire."

The LTPTP-F can be use as part of a complete control system or as a standalone AV solution, with optional wall rack mount plate for easy installation.
