Leaf allows easier access to more HDMI devices with the LTXP64, a 6-source to 4-zone matrix able to switch 6 unique HDMI sources to 4 independent zones.

It supports signals at up to 1080p/60 as well as 3D and Dolby Digital and DTS-HD audio formats within a 1RU device. The company also promises easy setup with EZ-Calibration and ZoneLock technology.

Control comes through front panel buttons and integration with common control systems via IP or RS232.

The LTXP64 is shipping now.
