TechLogix Networkx announces the TL-TP40-HDC2-- an extender set designed to transmit 18G 4K@60 4:4:4 HDMI and HDR video signals up to 40m using standard twisted pair cable.

To do so it uses HDBaseT technology. The input is HDMI and audio, while the audio is UTP. Power comes through external power supply.

Built-in bi-directional IR and RS232 control signal embedding allows the remote control of connected sources and displays, and replaces long distance HDMI cables with UTP cables.

The TL-TP40-HDC2 officially debuts at CEDIA Expo 2017.
