SnapAV's Araknis brand launches the 700 Series Outdoor Wireless Access Point-- a WAP offering the same networking capabilities as the indoor 700 Series WAP, only in an element-resistant body.

Designed for use in outdoor spaces such as decks, pergolas, large yards and guest houses, the 700 Series Outdoor WAP features an IP55 rating for resistance to rain, wind or dust. It also includes the proprietary OvrC remote system monitoring platform to help with fast installation and eliminate truck rolls.

A 3x3 antenna configuration allows it to deliver up to 1750Mbps of throughput, together with network-friendly functions such as band-steering, beamforming and fast roaming. It handles the 802.11a/b/g/n/c wifi, together with 802.11r/k.

The 700 Series Outdoor WAP debuts at CEDIA 2017.
