Atlona announces a 4K matrix-- the HDR-H2H-88MA, a 1RU 8 input and 8 output matrix with support for all video resolutions, audio formats and colour spaces in the HDMI 2.0b specification.

The HDR-H2H-88MA handles 4K/UHD video at 60Hz with 4:4:4 chroma sampling and HDMI data rates up to 18Gbps (10-bit colour). Stereo, unbalanced audio outputs are paired with each HDMI input, enabling two-channel PCM audio to be de-embedded and set to whole-house or commercial audio systems.

Control comes through either front-panel buttons and built-in LCD or Atlona Management System (AMS 2.0) software and the Velocity AV control system via either IP or RS232.

The HDR-H2H-88MA is available now.
