InfoComm 2019 sees Crestron expand the DM Lite endpoint line with the HD-RX-4K-510-C-E and HD-RX-4K-410-C-E receivers, both offering auto-switching, amplified audio outputs and network connectivity.

The DM Lite line offers simple yet high-performance transmitters and receivers able to switch and transport 4K signals over standard CAT5e cable. Also included is optional auto-switching, network connectivity, audio and video distribution, control distribution and audio amplification. Customers can mix and match DM Lite products to create simple systems for most spaces.

Customers simply need to pair any DM Lite receiver with a Crestron MPC3 media presentation controller to add room control. Engraveable buttons and dials on the MPC3 can be configured with the built-in .AV Framework software. The system can be provisioned, monitored and managed using any web browser via Crestron XiO Cloud IoT-based provisioning system.

The HD-RX-4K-510-C-E accepts multiple transmitter inputs and includes an amplifier, scaler and built-in .AV Framework technology. It features x3 DM Lite inpputs, x2 HDMI inputs, x1 HDMI output, x2 audio outputs, display control, RS-232, IR and CEC. The HD-RX-4K-410-C-E features x2 DM Lite inputs.
