Access Networks announces a partnership with Domotz-- one bringing a flexible and scalable Domotz remote network monitoring and management solution in every newly deployed Core Custom System.

According to the two companies, the decision to deploy Domotz solutions in Access Networks products was driven by the engineering power, fluidity and agility of Domotz as a company. The collaboration also enables both companies to learn from each other and enhance their product offerings to better meet the needs of luxury smart homes.

The Domotz RMM solution consists of 3 components-- the Domotz Pro Mobile Application, Domotz Cloud and Domotz Network Agent. Domotz is downloaded on local hardware or the Domotz Agent, a dedicated appliance sitting at the broadcast level of the network. The Domotz Cloud and the Pro Mobile Applications notify users in chase of changes that could affect network connection, speed or performance.

The partnership also gives dealers and installers an opportunity to deliver an "outstanding"

experience, driven by an enterprise-grade network and backed with best-in-class service and support. Installers can offer live, proactive network monitoring, charging either a monthly service fee or offering a complimentary service as a selling point for high-end customers.
