WyreStorm announces the H2L Series-- Class B HDBaseT additions to its matrix switcher line, available in 6x6 and 8x8 models able to switch between 2K and 4K UHD video sources (30Hz 4:2:0).

The matrix switchers handle HDR, HDCP 2.2 and multi-channel audio up to DTS:X and Dolby Atmos, and installers can send out the HDBaseT outputs up to 35m for 4K and 70m for 1080p.

A combination of HDR at 10-bit colour and PoH remotely powering receivers eliminates the need for local power supplies at display locations, while WyreStorm QuickSync instant switching includes uncompressed single frame end-to-end latency, as well as SmartEDID technology.

Control comes through bidirectional IR pass-through, RS232 and embedded web UI for setup, configuration and matrix switching with an online interface.
