WyreStorm announces Luxul is the latest networking equipment maker to add support for its NetworkHD AV over IP system, reflecting the rapid growth of the networking platform.

Luxul switches with NetworkHD support include the AMS-2624P, AMS-1208P and AMS-4424P models-- all part of the Luxul AV Series purpose-built for use with AV equipment. The switches feature rear panel ports and front-facing LEDs for clean integration with AV rack systems, and offer user-selectable blue/green LEDs for consistency with other rack mount equipment. Also supported is the XMS-2624P, a traditional front-facing port alternative.

"NetworkHD is the most powerful, innovative yet simplest line of AV over IP products on the market today and it is important that our switch manufacturer partners are as well," WyreStorm says. “Luxul’s line of AV switches offer the flexibility, simplicity and reliability we value so highly in our own products, with a good example being how their simple web-based tick box configuration enables a system to be set-up in seconds. When integrating with NetworkHD, our auto-discovery function means that for integrators the attachment of all components in a system is almost plug and play and they’re done!”

Configuration guides for Luxul and all Wyrestorm technology partners can be found in the Downloads tab of the NetworkHD product list in the link below.
