Gefen believes the Ultra HD/4K revolution is around the corner as it launches a trio of splitters for the routing of HDMI signals with up to 4Kx2K resolutions.

The splitters take x1 HDMI input and split it into either 2 (1:2), 4 (1:4) or 8 (1:8) outputs. They work with any HD source and features what Gefen calls "Fast Switching Technology."

Support options include HDCP, Deep Color, 3DTV pass-through and lossless audio formats such as Dolby TrueHD and DTS-HD Master Audio.

The hardware is surface-mountable and available in either black or white.
